DRAFT TANZANIA STANDARD

(Draft for comments only)

Alarm systems – Intrusion and hold-up systems –

Part 3: Control and indicating equipment

TANZANIA BUREAU OF STANDARDS

First Edition 2017

0 National Foreword

This draft Tanzania Standard is being prepared by the Manned Security Systems Technical Committee of the Tanzania Bureau of Standards (TBS), under the supervision of the Electrical Engineering Divisional Standards Committee (EEDC)

This draft Tanzania Standard is an adoption of the International Standard IEC 62642-3:2010 *Alarms systems – Intrusion and hold-up systems – Part 3: Control and indicating equipment,* which has been prepared by the International Electrotechnical Commission (IEC).

Terminology and conventions

Some terminologies and certain conventions are not identical with those used in Tanzania Standards; Attention is drawn especially to the following:

1) The comma has been used as a decimal marker for metric dimensions. In Tanzania Standards, it is current practice to use "full point" on the baseline as the decimal marker.

2) Where the words "International Standard(s)" appear, referring to this standard they should read "Tanzania Standard(s)".

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.

2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.

3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.

4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.

5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.

6) All users should ensure that they have the latest edition of this publication.

7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.

8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.

9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62642-3 has been prepared by IEC technical committee 79: Alarm and electronic security systems.

This standard is based on EN 50131-3 (2006).

The text of this standard is based on the following documents:

FDIS	Report on voting
79/310/FDIS	79/321/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts of the IEC 62642 series can be found, under the general title *Alarm systems – Intrusion and hold-up systems*, on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "http://webstore.iec.ch" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

INTRODUCTION

This part 3 of the IEC 62642 series of standards gives requirements for control and indicating equipment used in intrusion and hold-up alarm systems. The other parts of this series of standards are as follows:

Part 1   System requirements

Part 2-2 Intrusion detectors – Passive infrared detectors Part 2-

3 Intrusion detectors – Microwave detectors

Part 2-4 Intrusion detectors – Combined passive infrared / microwave detectors Part 2-5

Intrusion detectors – Combined passive infrared / ultrasonic detectors Part 2-6 Intrusion

detectors – Opening contacts (magnetic)

Part 2-71 Intrusion detectors – Glass break detectors – Acoustic Part 2-

72 Intrusion detectors – Glass break detectors – Passive Part 2-73

Intrusion detectors – Glass break detectors – Active Part 3 Control and

indicating equipment

Part 4   Warning devices

Part 5-3 Interconnections – Requirements for equipment using radio frequency techniques Part 6

Power supplies

Part 7   Application guidelines

Part 8   Security fog devices/systems

In order to insure the consistency of the whole IEC 62642 series, the terminology is defined at one place that is the master document IEC 62642-1 that gives general requirements concerning the intrusion system. Exception is made for specific terms to control and indicating equipment and where repetition is deemed essential for the clarity of this document.

Reference has been included to various implications arising from the detector standards. Full detail of the interconnection requirements could be the subject of a future standard.

A number of requirements are contained in this standard for which a formal test procedure can only be written by defining (and hence restricting) the technology by which the requirement is achieved. Accordingly, it has been recognised that such functions can be tested only by agreement between manufacturer and test house, according to documented information relating to how the required functionality has been achieved.

A table to cross reference IEC 62642-1 requirements against this standard and tests has been included in Annex D.

**ALARM SYSTEMS –
INTRUSION AND HOLD-UP SYSTEMS –**

Part 3: Control and indicating equipment

1 Scope

This part of the IEC 62642 specifies the requirements, performance criteria and testing procedures for control and indicating equipment (CIE) intended for use in intrusion and hold-up alarm systems (I&HAS) installed in buildings. This document also applies to CIE to be used in IAS or HAS.

The CIE may incorporate processing functions of other I&HAS components or its processing requirements may be distributed among such components.

This standard specifies the requirements for CIE installed in buildings using specific or non-specific wired interconnections or wire-free interconnections. These requirements also apply to ancillary control equipment (ACE) that are installed inside or outside of the supervised premises and mounted in indoor or outdoor environments.

Where CIE shares means of detection, interconnection, control, communication, processing and/or power supplies with other applications, these requirements apply to I&HAS functions only.

This standard specifies performance requirements for CIE at each of the four security grades identified in the IEC 62642-1. Requirements are also specified for four environmental classes covering applications for indoor and outdoor locations.

This standard includes mandatory functions, which shall be provided on all CIE for the appropriate security grade, as well as optional functions that may additionally be provided.

NOTE In this standard reference to the term "I&HAS" is used throughout, except where there is specific need to differentiate between the IAS and HAS portions of a system. The term is intended to include IAS and HAS when such systems are installed separately.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60068-1:1988, *Environmental testing – Part 1: General and guidance*

IEC 60068-2-75:1997, *Environmental testing – Part 2-75: Tests – Test Eh: Hammer tests*

IEC 60529, *Degrees of protection provided by enclosures (IP Code)*

IEC 62599-1, *Alarm systems – Part 1: Environmental test methods*

IEC 62599-2, *Alarm systems – Part 2: Electromagnetic compatibility – Immunity requirements for components of fire and security alarm systems*

IEC 62642-1:2010, *Alarm systems – Intrusion and hold-up systems – Part 1: System requirements*

IEC 62642-5-3, *Alarm systems – Intrusion and hold-up systems – Part 5-3: Interconnections – Requirements for equipment using radio frequency techniques*

EN 50131-6:2008, *Alarm systems – Intrusion and hold-up systems – Part 6: Power supplies* [1]

3 Terms, definitions and abbreviations

3.1   Terms and definitions

For the purposes of this document, the terms and definitions given in the IEC 62642-1, as well as the following, apply.

3.1.1
acknowledge
action of a user to accept an indication

3.1.2
alarm point
one or more detector(s) providing a common signal or message, at the CIE or at the ACE for the purpose of indication or processing

3.1.3
alarm signal or message
signal or message generated by an alarm point

3.1.4
biometric key
use of biometric characteristic by an authorized user to gain access to restricted functions or parts of a CIE

EXAMPLE: finger print or iris recognition.

3.1.5
conditioning
exposure of the Equipment Under Test (EUT) to environmental conditions in order to determine the effect of such conditions on the EUT

3.1.6
detector
device designed to generate an alarm signal or message in response to the sensing of an abnormal condition indicating the presence of a hazard

3.1.7
digital key
portable device containing digitally coded information used by an authorized user to gain access to restricted functions or parts of a CIE

EXAMPLE: magnetic card, electronic token or similar.
