ISO 18406:2017(E)

## **DRAFT TANZANIA STANDARD**

**Underwater acoustics — Measurement of radiated underwater sound from  
percussive pile driving**

*Draft for stakeholders comments only*

**TANZANIA BUREAU OF STANDARDS**

## National foreword

This Tanzania Standard is identical to ISO 18406:2017(E) *Underwater acoustics—Measurement of radiated underwater sound from percussive pile driving*, published by the International Organization for Standardization (ISO).

This standard was written to provide a standardized measurement method for the measurement of the radiated underwater sound during percussive pile driving. This document describes the methodologies, procedures, and measurement systems to be used for the measurement of the radiated underwater acoustic sound generated during pile driving using percussive blows with a hammer.

### 0.2 Terminology and conventions

Some terminology and certain conventions in the ISO standards are not identical with those used in Tanzania Standards and attention is drawn to the following:

the comma (,) has been used as a decimal marker for metric dimensions. In Tanzania Standards, it is current practice to use a full point (.) on the base line as the decimal marker and

wherever the words “International Standard” appear in this Tanzania Standard, they should be interpreted as “Tanzania Standard”.
