

**TBS/GTDC3 (5109)P1/ ISO 39001:2012 - Road Traffic Safety (RTS) management
system – requirement with guidance for use**

TANZANIA BUREAU OF STANDARDS

SCOPE

This International Standard specifies requirement for a Road Traffic Safety (RTS) management system to enable an organization that interact with the road traffic system to reduce death and serious injuries related to road traffic crashes which it can influence. The requirement in this International Standard development and implementation of an appropriate RTS policy, development of RTS objectives and action plan, which take into account legal and other requirement which the organization subscribes, and information about elements and criteria related to RTS that the organization identifies as those which it can control and those which it can influence.

This International Standard is applicable to any organization, regardless of its type, size and products and services provided, that wishes to

- a) improve RTS performance,
- b) establish, implement, maintain and improve RTS management system,
- c) assure itself of conformity with its stated RTS policy, and
- d) demonstrate conformity with this International Standards.

This International Standard is intended to address RTS management. It is not intended to specify the technical and quality requirements of transportation products and services (e.g road, traffic sign/light, automobiles, trams, and cargo and passenger transportation services, rescue and emergency services).

It is not intent of this International Standard to imply uniformity in the structure of RTS management systems or uniformity of documentation.

RTS is shared responsibility. This International Standard is note intended to exclude the road users from their obligations to comply with the law and behave responsibly. It can support the organization in its efforts to encourage road users to comply with law.

All requirements of this International Standard are generic.

Where any requirement of this International Standard cannot applied due to the nature of organization and its products or services, that requirement can be considered for exclusion, provided the exclusion and the reason for exclusion are documented.

Where exclusion are made, claims of conformity to this International Standards are only acceptable where these exclusion do not affect the organization's ability to establish, implement, maintain and improve an RTS management system successfully.
