Draft Tanzania Standard

Sensory analysis -- Methodology – Ranking
NATIONAL FOREWORD

1.0 INTRODUCTION

This standard was adopted by sensory evaluation technical committee, under the supervision of Food and Agriculture Standards Divisional committee (AFDC).

This International Standard describes a method for sensory evaluation with the aim of placing a series of test samples in rank order.

This method allows for assessing differences among several samples based on the intensity of a single attribute, of several attributes or of an overall impression. It is used to find if differences exist, but cannot determine the degree of difference that exists between samples.

It is identical to ISO 8587:2006 Sensory analysis -- Methodology – Ranking, which was published by International Organization for Standardization.

TERMINOLOGY AND CONVENTIONS.

This text of International standard, if found suitable, may be approved for publication as Tanzania standard without deviations.

Some terminologies and certain conventions are not identical with those used in Tanzania standards: attention is drawn especially to the following:-

1. The comma has been used as decimal marker for Metric dimensions. In Tanzania standards, it’s currently practice to use “full point” on the baseline as decimal marker.

2. Where the words “International standard (s)” appear, referring to this standard they should read “Tanzania Standard(s)”.
