

DRAFT TANZANIA STANDARD

TBS/MMDC2 (6102) P3 / ISO19426 - 1:2018 Structures for mine shafts Part 1: Vocabulary

TANZANIA BUREAU OF STANDARDS

National foreword

This draft Tanzania Standard is being prepared by the Mine planning, Operations and Services Technical Committee (MMDC 2), under the supervision of the Mining and Minerals Standards Divisional Committee (MMDC).

This draft Tanzania Standard is the identical adoption of ISO 19426-1:2018 Structures for mine shafts — Part 1 Vocabulary which was prepared by ISO/TC 82, Mining.

The ISO standard title on the cover page has been written in bilingual, for the purpose of this Tanzania standard only English text of the title should be used.

Some terminology and certain conventions are not identical with those used in Tanzania standards; attention is drawn especially to the following: -

- The comma has been used as a decimal marker for metric dimensions. In Tanzania Standards, it is current practice to use “full point” on the baseline as the decimal marker.
- Wherever the words ‘International Standard’ appears in the text, referring to this draft standard, they should read as ‘Tanzania Standard’.

Scope

This document specifies the terms and definitions related to the structures for mine shafts, used throughout ISO 19426.

Terms used in mining can vary from conventional engineering usage, and they vary quite considerably between different countries. For this reason, alternative terms are provided in many of the entries. The preferred terms, given in bold type, are those used throughout ISO 19426.

It is assumed that users of this document are familiar with mining, so common terms with normal dictionary usage are not defined. Also, no definitions are provided for terms that can be widely used in mining but are not explicitly used in ISO 19426.
