

DRAFT TANZANIA STANDARD

Fluid fertilizers — De-aeration of suspension samples by film disentrainment

DRAFT TANZANIA STANDARD FOR STAKEHOLDERS COMMENTS ONLY

0. National Foreword

The Tanzania Bureau of Standards is the statutory national standards body for Tanzania, formally established by the Act.No.3 of 1975, which was amended and repealed by Act.No.2 of 2009.

The Fertilizers, soil conditioners and beneficial substances Technical Committee, under the supervision of the Agriculture and Food Standards Divisional Committee (AFDC), has prepared this Tanzania Standard.

This Tanzania standard is the identical adoption to ISO 10248:1996 - Fluid fertilizers — De-aeration of suspension samples by film disentrainment.

Terminology and conventions

The text of the International Standard is hereby being recommended for approval without deviation for publication as Tanzania standard.

Some terminologies and certain conventions are not identical with those used in Tanzania standards; attention is drawn to the following: -

- 1) The comma has been used as a decimal marker for metric dimensions. In Tanzania Standards, it is current practice to use “full point” on the baseline as the decimal marker.
- 2) Where the words “International Standard(s)” appear, referring to this draft standard they should read “Tanzania Standard(s)”.

1. Scope

This document specifies a procedure for the de-aeration of suspension samples for physical testing.

NOTE: The method is not suitable if the sample contains more than a trace of free ammonia, if there is permanent decomposition in the suspension, or if the sample is too viscous.
