## Foreword

This Tanzania Standard was published under the authority of the Board of Director of Tanzania Bureau of Standards.

Tanzania Bureau of Standards (TBS) is the statutory national standards body for Tanzania established by the Standards Act Cap. 130.

Tanzania Standards are developed through Technical Committees that are representative of key stakeholders including government, academia, consumer groups, private sector and other interested parties. The Technical Committees work under the supervision of Divisional (sectoral) Committees. The Standards are developed in accordance with the Guide and Procedure for Development of Tanzania Standards and TZS 0, *Guide for presentation of Tanzania Standards*.

Tanzania Standards are subject to review, to keep pace with science and technological advances. Users of the Tanzania Standards are therefore expected to ensure that they always have the latest versions of the standards they are implementing.

This Tanzania Standard was developed under the supervision of the Mining and Minerals Divisional Standards Committee [MMDC]. The Technical Committee responsible for the standard is [MMDC 7 *Jewellery, gemstones and Precious Metals*]

This *second edition* cancels and replaces the first edition (TZS 2855:2021).

## National foreword

This Tanzania Standard is identical to ISO 9202:2026, *Jewellery and precious metals — Fineness of precious metal alloys*, published by the International Organization for Standardization (ISO)

Some terminologies and certain conventions used in International Standards are not identical with those used in Tanzania Standards and attention is drawn especially to the following:

The comma has been used as a decimal marker for metric dimensions. In Tanzania, it is current practice to use a “full point” on the baseline as a decimal marker.

Wherever the words ('International Standard'.) appear referring to this document, they should be interpreted as 'Tanzania Standard'

## **Scope**

This document specifies a range of fineness of precious metal alloys recommended for use in the field of jewellery.
