IEC 62031:2026

DRAFT TANZANIA STANDARD

(Draft for comments only)

LED modules - Safety requirements

Draft for stakeholders' comments only

TANZANIA BUREAU OF STANDARDS

© TBS 2026

First Edition 2026

1 National Foreword

This draft Tanzania Standard is being prepared by the Electrical Equipment Technical Committee, under the supervision of the Electrotechnical divisional standards committee (EDC)

This draft Tanzania Standard is an adoption of the International Standard **IEC 62031:2026** LED modules - Safety requirements, Which has been prepared by the International Electrotechnical Commission

2 Terminology and conventions

Some terminologies and certain conventions are not identical with those used in Tanzania standards; attention is drawn especially to the following: -

1) The comma has been used as a decimal marker for metric dimensions. In Tanzania Standards, it is current practice to use “full point” on the baseline as the decimal marker.

2) Where the words “International Standard(s)” appear, referring to this standard they should read “Tanzania Standard(s)”.

CONTENTS

FOREWORD 4
1 Scope 6
2 Normative references 6
3 Terms and definitions 7
4 Classification 11
5 General requirements 11
6 General notes on tests 12
6.1 General 12
6.1.1 Type test 12
6.1.2 Test samples 12
6.1.3 Compliance by inspection of relevant data 12
6.2 Default test conditions 12
6.2.1 General 12
6.2.2 Electrical supply conditions 13
6.2.3 Ambient test conditions 13
7 Marking 13
7.1 Overview 13
7.2 Marking content 14
7.3 LED module marking 15
7.4 Marking of control terminals 15
7.4.1 Control terminals not insulated from the mains supply 15
7.4.2 Control terminals not insulated from SELV output 16
7.5 Durability and legibility of marking 16
8 Electrical safety 16
8.1 General 16
8.2 Protection against electric shock 16
8.2.1 Construction 16
8.2.2 Tests for accessibility of live parts 19
8.2.3 Requirements for accessible conductive parts 19
8.2.4 Requirements for SELV circuits and PELV circuits 21
8.2.5 Capacitor discharge requirements 21
8.3 Electric strength 22
8.3.1 General 22
8.3.2 Electric strength test 22
8.4 Creepage distances, clearances and distances through insulation 23
8.5 Electrical connections 23
8.6 Terminals 23
8.7 Earthing 24
8.7.1 General 24
8.7.2 Protective conductor current 24

Draft for stakeholders' comments only

9 Thermal safety 24
9.1 Resistance to heat and fire 24
9.1.1 Resistance to heat 24
9.1.2 Resistance to flame and ignition 25
9.2 Heat management 26
9.2.1 General 26
9.2.2 Thermal interface material 26
9.2.3 Testing 26
9.2.4 Compliance 27
10 Mechanical safety 28
10.1 General 28
10.2 Constructional requirements for mechanical safety 28
10.3 Mechanical strength 28
10.4 Screws and mechanical connections 28
11 Photobiological safety 29
11.1 Actinic UV hazards for skin and eye (200 nm to 400 nm wavelength) 29
11.2 UV-A hazard for the eye lens (315 nm to 400 nm) 30
11.3 Retinal blue light hazard (300 nm to 700 nm) 30
11.4 Retinal thermal hazard (380 nm to 1 400 nm) 30
11.5 Infrared radiation hazard for the eye (780 nm to 3 000 nm) 30
11.6 Thermal hazard for the skin (380 nm to 3 000 nm) 30
12 Fault conditions 31
12.1 General 31
12.2 Applicable fault conditions 31
12.2.1 Electronic components 31
12.2.2 PCB tracks 31
12.2.3 Insulation layers 31
12.3 Test power supply requirements 31
12.3.1 LED modules supplied by voltage sources 31
12.3.2 LED modules supplied by current sources 32
12.4 Test procedures and compliance 32
12.4.1 Test procedures 32
12.4.2 Compliance 32
13 Abnormal conditions 33
13.1 General 33
13.2 Applicable abnormal conditions 34
13.2.1 Insertion orientation 34
13.2.2 Maximum load at output terminals 34
13.2.3 Phase cut dimmers test 34
Annex A (normative) Measurement of touch current and protective conductor current 36
A.1 General conditions 36
A.2 Measurement of protective conductor current 36
A.3 Measurement of touch current for normal and abnormal conditions 36
A.4 Test procedure 37
Annex B (informative) Information for luminaire design 41
B.1 General 41
B.2 Water contact 41
B.3 Blue light hazard assessment 41

Draft for stakeholders' comments only

B.3.1 LED modules classified as BLH-A 41
B.3.2 LED modules classified as BLH-B 41
B.3.3 LED modules classified as BLH-C 41
B.4 Special information 42
B.4.1 Interchangeability 42
B.4.2 Heat management 42
B.4.3 Working voltage 44
B.4.4 LED module protection against electric shock 44
B.4.5 Controlgear output current 44
Annex C (informative) Information for controlgear design 45

INTERNATIONAL ELECTROTECHNICAL COMMISSION

LED modules - Safety requirements

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
6) All users should ensure that they have the latest edition of this publication.
7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at https://patents.iec.ch. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 62031 has been prepared by subcommittee 34A: Electric light sources, of IEC technical committee 34: Lighting. It is an International Standard.

This third edition cancels and replaces the second edition published in 2018. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

a) Complete review of the document structure, detailed technical requirements and tests, including but not limited to what is individually described under items b) to i);
b) Clarification of the scope and revision of the applicability of this document to independent and integral LED modules;
c) Updated terms and definitions;
d) Clearer specification for clause general requirements and clause general test requirements;
e) Update of the marking clause, such as marking of control terminals;

Draft for National Committees only

f) A full review and update of the electrical safety, thermal safety, and mechanical safety requirements preventing misinterpretation and ambiguity;

g) Updated photobiological safety requirements;

h) Revised and updated fault conditions and abnormal conditions requirements;

i) Removal of the annex relating to conformity testing during manufacture.

The text of this International Standard is based on the following documents:

Draft	Report on voting
34A/2464/FDIS	34A/2467/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

– reconfirmed,

– withdrawn, or

– revised.

Draft for stakeholders' comments only

1 Scope

This document specifies safety requirements for LED modules for operation on DC supplies up to 1 500 V or on AC supplies up to 1 000 V. This document does not include requirements for performance characteristics of LED modules.

This document does not apply to:

- LED packages;
- LED modules for automotive lighting;
- OLED modules;
- LED lamps.

NOTE 1 Products that were designated as "independent LED modules" in the previous edition of IEC 62031 are considered luminaires which comprise LED module(s) as an integral component.

NOTE 2 Requirements for LED modules that are an integral component of the luminaire are specified in IEC 60598-1:2024. IEC 60598-1:2024, 4.3.1, makes reference back to this document as far as reasonable.

NOTE 3 Where the word "LED module" is used in this document, it is understood to be "built-in LED module".

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
