

DRAFT TANZANIA STANDARD

Materials for the production of primary aluminium - Dense refractory bricks-determination cryolite resistance

TANZANIA BUREAU OF STANDARDS

0 National foreword

The Tanzania Bureau of Standards is the statutory national standards body for Tanzania, established under the act.No.3 of 1975, amended by act.No.2 of 2009

This finalized Tanzania Standard is being prepared by the Aggregates, Sand and Concrete Technical Committee, under the supervision of the Building and Construction Divisional Standards Committee (BCDC)

This Draft Tanzania Standard is identical adoption of **ISO 20292:2009 Materials for the production of primary aluminium - Dense refractory bricks-determination cryolite resistance** published by the International Organization for Standardization (ISO).

Terminologies and conventions

The text of the International Standard is hereby being recommended for adoption without deviation for publication as draft Tanzania standard.

Some terminologies and certain conventions are not identical with those used as Tanzania standards; attention is drawn to the following:

The comma has been used as a decimal marker for metric dimensions. In Tanzania, it is current practice to use a full point on the baseline as the decimal marker.

Wherever the words "International Standard" appear, referring to this standard, they should read as "Tanzania Standard".

1 Scope

This draft Tanzania Standard covers materials for the production of primary aluminium.

This draft Tanzania Standard specifies a method for the determination of the resistance of dense refractory bricks to cryolite melt with excess sodium fluoride.
