

**DRAFT TANZANIA STANDARD**

---

**Board — Determination of bursting strength**

*For Stakeholders Comments Only*

**TANZANIA BUREAU OF STANDARDS**

---

## CDC 10 (3241) DTZS ISO 2759:2014

### National foreword

Tanzania Bureau of Standards (TBS) is a sole National Standards body, established by the Standards Act No. 2 of 2009. It is mandated, among other functions, with formulation of National Standards in all products.

This Draft of Tanzania Standard is being prepared by Stationery and Paper Products Technical Committee under the supervision of Chemical Divisional Standards Committee.

This Draft Tanzania Standard is identical to ISO 2759:2014 *Board — Determination of bursting strength* published by the International Organization for Standardization (ISO).

### Terminology and conventions

Some terminology and certain conventions in the ISO standards are not identical with those used in Tanzania Standards and attention is drawn to the following:

The comma (,) has been used as a decimal marker (.) for metric dimensions. In Tanzania Standards, it is current practice to use a full point on the base line as the decimal marker.

Wherever the words “International Standard” appear in this Tanzania Standard, they should be interpreted as “Tanzania Standard”.

### Scope

This International Standard specifies a method for measuring the bursting strength of board submitted to increasing hydraulic pressure. It is applicable to all types of board (including corrugated and solid fibreboard) having bursting strengths within the range 350 kPa to 5 500 kPa.
