

## DRAFT TANZANIA STANDARD

---

**Pulp, paper and board - Determination of pentachlorophenol  
in an aqueous extract**

For Stakeholders Comments Only

**TANZANIA BUREAU OF STANDARDS**

---

**National foreword**

## **CDC 10 (2802) DTZS/ ISO 187:2022**

Tanzania Bureau of Standards (TBS) is a sole National Standards body, established by the Standards Act No. 2 of 2009. It is mandated, among other functions, with formulation of National Standards in all products.

This Draft of Tanzania Standard is being prepared by Stationery and Paper Products Technical Committee under the supervision of Chemical Divisional Standards Committee.

This Finalized Tanzania Standard is identical to ISO 15320:2011 *Pulp, paper and board - Determination of pentachlorophenol in an aqueous extract* published by the International Organization for Standardization (ISO).

### **Terminology and conventions**

Some terminology and certain conventions in the ISO standards are not identical with those used in Tanzania Standards and attention is drawn to the following:

The comma (,) has been used as a decimal marker (.) for metric dimensions. In Tanzania Standards, it is current practice to use a full point on the base line as the decimal marker.

Wherever the words “International Standard” appear in this Tanzania Standard, they should be interpreted as “Tanzania Standard”.

### **Scope**

This International Standard specifies a test method for the determination of pentachlorophenol (PCP) in an aqueous extract of pulp, paper and board. Although it was developed for paper and board intended to come into contact with foodstuffs, it is applicable to all kinds of pulp, paper and board.

The working range for acetylation is 0,05 mg/kg to 0,5 mg/kg.
