

DRAFT TANZANIA STANDARD

Pulps - Estimation of dirt and shives - Part 1: Inspection of laboratory sheets by transmitted light

For Stakeholders Comments Only

TANZANIA BUREAU OF STANDARDS

CDC 10 (3256) DTZS ISO 5350-1:2006

National foreword

Tanzania Bureau of Standards (TBS) is a sole National Standards body, established by the Standards Act No. 2 of 2009. It is mandated, among other functions, with formulation of National Standards in all products.

This Draft of Tanzania Standard is being prepared by Stationery and Paper Products Technical Committee under the supervision of Chemical Divisional Standards Committee.

This Finalized Tanzania Standard is identical to ISO 5350-1:2006 *Pulps - Estimation of dirt and shives - Part 1: Inspection of laboratory sheets by transmitted light* published by the International Organization for Standardization (ISO).

Terminology and conventions

Some terminology and certain conventions in the ISO standards are not identical with those used in Tanzania Standards and attention is drawn to the following:

The comma (,) has been used as a decimal marker (.) for metric dimensions. In Tanzania Standards, it is current practice to use a full point on the base line as the decimal marker.

Wherever the words "International Standard" appear in this Tanzania Standard, they should be interpreted as "Tanzania Standard".

Scope

This part of ISO 5350 specifies a method for the estimation by transmitted light of the visible dirt and shives in laboratory sheets prepared from pulp. It is, in principle, applicable to all kinds of pulp, although it is mainly intended for pulp that is not manufactured in sheet form.
