## **DRAFT TANZANIA STANDARD**

**(Draft for comments only)**

---

**Household and similar electrical Appliances-Minimum Energy  
Performance-Requirements and test Methods-Part 1-1:  
Comfort fans**

**TANZANIA BUREAU OF STANDARDS**

---

## **1 National Foreword**

This draft Tanzania Standard is being prepared by the Energy Efficiency Technical Committee, under the supervision of the Electrotechnical Divisional Standards Committee (EDC)

This standard is the first edition and it should be read in conjunction with other standards pertinent to Comfort fans such as those of Safety and performance requirements.

## **2 Terminology and conventions**

Some terminologies and certain conventions are not identical with those used in Tanzania Standards; Attention is drawn especially to the following:

- 1) The comma has been used as a decimal marker for metric dimensions. In Tanzania Standards, it is current practice to use “full point” on the baseline as the decimal marker; and
- 2) Where the words “International Standard(s)” appear, referring to this standard they should read “Tanzania Standard(s)”.

### **3 Scope**

This document specifies the minimum energy performance requirements and performance measuring methods for comfort fans and regulators for household and similar use, including conventional fans and tower fans, their rated voltage being not more than 250V for single-phase fans and 480V for three-phase fans, and their rated power input being less than 125W.

Draft for Stakeholders comments only
