

DRAFT TANZANIA STANDARD

Pulses — Determination of impurities, size, foreign odours, insects, and species and variety — Test methods

TANZANIA BUREAU OF STANDARDS

AFDC 16 (3625) DTZS/ISO 605:1991

0. National Foreword

The Tanzania Bureau of Standards is the statutory national standards body for Tanzania, formally established by the Act.No.3 of 1975, which was amended and repealed by Act.No.2 of 2009.

The Cereals and Pulses Technical Committee, under the supervision of the Agriculture and Food Standards Divisional Committee (AFDC), has prepared this Tanzania Standard.

This Tanzania standard is the identical adoption to ISO 605:1991 Pulses — Determination of impurities, size, foreign odours, insects, and species and variety — Test methods, published by International Organization for Standardization (ISO).

Terminology and conventions

The text of the International Standard is hereby being recommended for approval without deviation for publication as Tanzania standard.

Some terminologies and certain conventions are not identical with those used in Tanzania standards; attention is drawn to the following: -

- 1) The comma has been used as a decimal marker for metric dimensions. In Tanzania Standards, it is current practice to use “full point” on the baseline as the decimal marker.
- 2) Where the words “International Standard(s)” appear, referring to this standard they should read “Tanzania Standard(s)”.

1. Scope

This International Standard specifies methods not given in other international Standards for testing pulses which have not been processed and which are intended for human consumption or for animal feeding stuffs.
